** Types of Lists **

- There are two types of list 1) ordered 2) Unordered
- In ordered list we can change icon by type attribute using 1 for integers , a for alphabets I for roman numbers etc. Means list with some order
- While the Unordered list don't consist any order it is just unordered without any order only have a dot icon it can be change through css.
- Ordered List →
- Unordered List →
- The li in the html file is used to represent element in the lists.
